

Portland, Apr 29, 1890.

Dear Sir;

In a circle of friends recently I made the statement, as showing the remarkable tenacity of gold, that a gold dollar could be beaten into leaf so that it would cover a space 32 feet square. I was laughed at, and it is possible the laughter was justifiable.

To settle the question will you kindly advise me what the possibilities are in the above direction? This is out of the line of the work at the mint I know, but you probably have data at hand by which you can determine the question. Respectfully, Philip F. French

To Hon. T. O. Beach  
Minister of Mint.

Relative to the ductility  
of Gold.

May 2 1890

[Abstract:] Relative to the ductility of gold.

Portland, April 29, 1890

Dear Sir:

In a circle of friends recently I made the statement, as showing the remarkable tenacity of gold, that a gold dollar could be beaten into leaf so that it would cover a space 32 feet square. I was laughed at, and it is possible the laughter was justifiable.

To settle the question will you kindly advise me what the possibilities are in the above direction? This is out of the line of the work at the mint I know, but you probably have data at hand by which you can determine the question.

Respectfully,  
Philp F. Turner
